

Reduce unwanted glare when driving . . .

Whether it's the sun reflecting off wet road surfaces, the dazzle from light reflecting off bright buildings or the intensity of modern headlights at night, glare is an issue we suffer from when driving.

Apart from making sure your prescription is always up-to-date, our qualified Dispensing Opticians can offer some help with our range of advanced lens options designed to reduce glare and promote a more comfortable driving experience . . .

Discover a local Independent Optician that really cares about your vision

Experiencing comfortable vision when you're driving is of great importance to most of us and we offer a number of solutions to help . . .

Adaptive sun protection

For convenience it's sometimes nice to have one pair of glasses for everything. Our range of photochromic lenses offer just this: clear at night-time and a dark tint in bright sunlight. Best of all, because they are always adapting to the level of light, you won't even notice the depth of tint constantly changing to provide comfortable vision in all lighting conditions.

Full sun protection

When you need more protection from the intensity of reflected light on wet road surfaces, on water or on snow, you'll benefit greatly from a polarised sunglass lens. Our range of lenses include 100% protection from harmful UV and for even more demanding environments, try our polarised Zeiss Skylet lenses that include a high-contrast enhancement filter.

Glare reduction from headlights

Reducing the glare when driving at night is often top on the requirements list for many drivers. By combining the latest reflection-free coatings with advanced contrast enhancing filter technology, our Hoya EnRoute and EnRoute Pro lenses can dramatically improve your driving experience during daytime and at night. Available in single vision and digital varifocal options.
